

# MEMORIAL BARDUCCI-BOMBARDELLI

Saturday, November 16th, 2024  
Charlie Hotel, Viale Trieste 281, Pesaro, Italy 61121

## STAVROS PELEKANOS

Mastering contemporary implant prosthodontics

English language 

### Morning: Immediacy and delayed implant concepts in the anterior region

Implant placement in the esthetic zone remains always a challenging clinical procedure requiring clinical skills and meticulous planning. “Maintain or recreate the volume” has always been a dilemma for the clinician the last decades affecting the treatment choice and often the clinical outcome. Immediate implants seem to gain again more trust since better hardware and software are being used.

The purpose of this presentation is to provide simple clinical concepts to ensure stable transmucosal contours with high white and pink esthetic scores regardless of implant placement timing. Starting with the proper implant macro-geometry and guided implant placement, understanding the importance of the abutment design and the different zones of the transmucosal contour, the participants will be able to master step by step simple clinical procedures to achieve better long-term esthetic outcomes.

### Afternoon: Designing the full mouth implant rehabilitation – from FP1 to FP3

Treatment planning with implants in full arch edentulous cases is always challenging in implant dentistry. Although prosthetically driven implant placement started being implemented the last 2 decades, implant placement became more accurate with the use of Digital technology and guided implant surgery.

The advancements of materials like Zirconia, CAD software's, face scanners and CAM procedures have simplified the treatment workflow resulting in more predictable results with significantly less complications.

This presentation will focus on the treatment methodology of terminal dentition and edentulous cases with implants. Alignment procedures, CAD design, surgical and prosthetic guide stents and clinical procedures will be presented step by step. Furthermore, different options of the final restoration will be discussed in terms of CAM design and material choice.

### Speaker: Dott. Stavros Pelekanos

Dr. Stavros Pelekanos received his undergraduate degree in Dentistry (D.D.S.) from the University of Athens, Greece. In 1993, he obtained his doctoral degree in Prosthodontics (Dr med dent) from the University of Freiburg (Prof. Dr. J.R. Strub), Germany. Following his professional training, Dr. Pelekanos established a private practice in Athens, oriented towards prosthodontics, implantology and esthetic dentistry.

In 2002, he was appointed full-time Lecturer at the Department of Prosthodontics, Dental School, University of Athens, Greece, and in 2012 Assistant Professor in the same department. Since 2013 he is an active member of the European Academy of Esthetic Dentistry (EAED). His professional affiliations include: The International College of Prosthodontics (ICP), European Prosthodontic Association (EPA), Greek Prosthodontic Association and many others. He is a faculty member of glDE Institute (Global Institute of Dental Education, Los Angeles, California) lecturing internationally and performing hands on courses on implants, aesthetics and restorative procedures.

In 2008 and 2011, Dr. Pelekanos received second and first prize at the scientific award competition of the European Academy of Esthetic Dentistry held in Madrid, Spain and Istanbul, Turkey respectively. To date he has published over twenty articles in peer reviewed journals and 3 chapters in books.

## Mastering contemporary implant prosthodontics

- 09.00 - 10.30 Single implants in the esthetic zone. Implant design, abutment selection (customized vs. prefabricated abutments, screw- vs. cement-retained) and treatment workflow.
- 10.30 - 11.00 Coffee break
- 11.00 - 12.30 How to understand and develop the transmucosal contour around implants. From immediate loading to early and late implant concepts. The digital incorporation in contemporary implant prosthodontics.
- 12.30 - 14.00 Lunch break
- 14.00 - 15.30 Full arch implant reconstruction. From FP1 to FP3. Fixed vs removable vs “retrievable” implant rehabilitations- Selecting the appropriate attachment and/or bar design for overdentures.
- 15.30 - 16.00 Coffee break
- 16.00 - 17.30 Treatment workflow in full arch implant cases - Analog and digital approach. Ideal orientation of the occlusal plane-Facebow vs natural head position. Creating the digital patient (face scan, plane orientation, lower jaw movement tracking).
- 17.30 - 18.00 Discussion

**This event is dedicated to the memory of Giancarlo Barducci and Tiziano Bombardelli,** two great figures who played an important role in dentistry. Both of them have significantly contributed to the professional and personal growth of our group and the whole dental community thanks to their expertise, the passion for sharing knowledge and the innate kindness of their heart.

## Registration fee

€ 180,00 for single registration

€ 150,00 for combined registration (2 or more participants)

## Registration

You can enrol online on our website [www.fradeanieducation.com](http://www.fradeanieducation.com) or by contacting us:
